 Tyumen, Rusia

SUMMARY

I'm a second-year student at TSU, majoring in "Information Security." Before university, I started learning Python. At the university, we studied C++ and other skills, including soft skills. Later, I got into Linux and networking, mastering Linux administration (Bash command line) and understanding network principles. Then I explored DevOps tools, learning basics like Ansible, Docker, Terraform, Grafana, and Prometheus. I'm also interested in information security, especially Kali tools and their use in Red Team roles.

I continuously study through online courses and workshops, completing over 100 hours in information security, DevOps, and Linux. I haven't worked officially in this field yet. My certificates are available here: <https://github.com/Jahamars/sert>.

SKILLS

• Linux • Debian • Arch • Astra • Python • Bash • C++ • PostgreSQL • All Kali tools • CI/CD • Docker • Git • GitHub • VoIP • HTML • CSS • Kali • GNU tools • GitLab CI • Ansible • Grafana • Prometheus • Nginx • iac • Packer • Yandex Cloud • Ubuntu • TCP/IP
